AERZEN GROUP ACQUIRES SUPRAFILT

Loughton UK: Aerzen Machines Limited acquired Suprafilt Limited, experts in the design, manufacture, and installation of aeration systems for the Wastewater Treatment sector. Suprafilt offers a full turnkey solution and access to a unique product range and is the industry leader for the installation of Nereda systems in the UK.

Suprafilt focuses on delivering projects efficiently, by staying at the forefront of technical advances while taking down any barriers to getting the job done.

Suprafilt enjoys partnerships with universities, independent research institutions and the world's leading technical and process scientists and experts to remain at the leading edge of technology in this field.

Matthew Morey, Director Aerzen Western Europe, states: "The acquisition of Suprafilt supports Aerzen's global strategy to expand and enhance the company's Wastewater Treatment capabilities and offerings as system suppliers. More importantly, Suprafilt develops and produces state-of-the-art products, allowing us to create innovative solutions to meet our customers' requirements for greater efficiency and value.

They are driven, professional, flexible, and approachable. Customers appreciate the reliability, high service levels, and the quality of work."

Graeme Fielden, Managing Director of Suprafilt, states, "The strategic fit between Aerzen and Suprafilt offers tremendous opportunities for growth in the markets each company serves. Becoming part of the Aerzen Group with over 50 subsidiaries all over the world will enable us to serve our customers while strengthening our position more effectively.

This acquisition is a significant step forward in offering more complete solutions to the market."

About Aerzen Machines Limited

Aerzen Machines Ltd was founded in 1973 and is a wholly owned subsidiary of Aerzener Maschinenfabrik GmbH, a recognised world leader in the production of rotary positive displacement machines since 1868. Aerzen Machines is headquartered in Loughton, Essex, with multiple offices and service centres throughout the United Kingdom and Ireland. Aerzen Machines Ltd designs and manufactures positive displacement blowers, screw blowers, screw compressors, and high-speed turbo blowers with installations around the world. The company specialises in Wastewater Treatment aeration, pneumatic conveying of bulk materials, and process gas conveying with high-efficiency equipment and world-class product service and support.
